HUMA 440A - Honors/Hooked: Narratives of Addiction, Recovery, and Redemption

Credits: 4

This course explores literature about addiction through both literary and psychological lenses. It focuses on the redemption narrative that structures the understanding of addiction for writers and readers alike. Readings include stories of religious redemption, short fiction, memoirs, self-help texts, and narrative and psychological theory. This course is part of the Honors Symposium "Engaging Addiction". The courses in the Symposium join several times during the semester for common meetings where perspectives can be compared and explored.

HUMA 440B - Honors/That Belongs in a Museum! Museums and the Ownership of Antiquities

Credits: 4

Suppose you stumbled upon an artifact from an Indigenous Native American people in your backyard. Do you own it? Or do the heirs of those who produced it? Or does it belong in a museum for all to see? In a series of controversial case studies we will examine what it means to "own" the past, how it should be protected and preserved, and what role museums have had--and should have--in safeguarding that past.

HUMA 440H - Honors/Changing Our Minds: Revolutions in Thought
Credits: 4

This course is inspired by Freud's idea that human self-understanding advances during great revolutions in thought. We study several revolutions in science and belief, from Marx to Darwin, and consider whether a general model applies to them all. How have ideas about the universe and human beings' place in it changed dramatically at certain points in history? Do revolutions in thought have a common structure? What revolution are we living in today? This course is part of an Honors symposium titled "The Copernican Lens: Dawn and Limits of Certainty in Physical Science and the Humanities", which runs concurrently with three other "Copernicus Lens" courses in other fields during the same semester. Taking its point of departure from the revolution in astronomy introduced by Nicolaus Copernicus, the symposium explores the intersections of types of thinking about the universe and humanity across history, especially the relationship between scientific and humanistic thinking. The implications of key transformations in scientific and humanistic thought are traced in the realms of philosophical ideas about humans' place in the world, and historical understandings of the development of science, belief, and truth itself. The course will be run in a seminar, discussion-based format, meeting twice a week for discussion (Mondays & Wednesdays) and once a week (Fridays) for a shared plenary with the other three "Copernicus Lens" courses. Among the requirements of each course in the Honors symposium is participation in plenary sessions when the students from all four courses meet together. The four instructors (Professors Nathan Schwadron [Physics], Subrena Smith [Philosophy], Rachel Trubowitz [English], and Paul Robertson [Classics, Humanities and Italian Studies]) have planned the plenary sessions around common activities and learning materials, approached from the individual perspectives of their own discipline. By learning from each of the professors, the students in all the courses will gain an understanding of the different disciplinary perspectives that can be applied to the study of science in its cultural and historical contexts. The course qualifies for "Historical Perspectives" credit in the Discovery Program because it introduces students to major developments in the history of science and belief that have significantly shaped contemporary life. Through study of specific episodes and historians' interpretation of them, students will gain an understanding of the methods of historical inquiry. They will also come to grasp the historical contingency of beliefs and assumptions through entering imaginatively into worldviews different from those of the present.
