

PROJECT MANAGEMENT (PM)

Visit the [Course Schedule Search website](#) to find out when courses will be offered during the academic year.

Read more about the courses within this subject prefix in the descriptions provided below.

PM 611 - Advanced Project Management

Credits: 4

This course builds on the foundation of MGMT 626 by introducing coverage of advanced topics in project scheduling, risk and quality management, and cost control as well as providing comprehensive knowledge of scheduling and other project management tools. The course also addresses the appropriate use and application of Agile Project Management.

Prerequisite(s): MGMT 626 with a minimum grade of D-.

Grade Mode: Letter Grading

PM 613 - Organizational Behavior and Projects

Credits: 4

This course details the relationship between the organizations that host the projects and the projects themselves. Projects are a key vehicle for the execution of organizational strategy, and the effectiveness of that execution is determined to a large extent by the environment that the organization itself creates for those projects. This course addresses topics including project organization and context, strategic project management, and ethics and professionalism. It also explores the benefits of implementing a project portfolio management practice within an organization.

Prerequisite(s): PM 611 with a minimum grade of D-.

Grade Mode: Letter Grading
